**INDIEC Member Buzzi Unicem USA
Offers Tour of Cement Plant
Thursday, June 8, 2006
9:30 a.m. – 1:30 p.m.
(Lunch Included)**

Please Join Us

On June 8, INDIEC member Buzzi Unicem USA will host a tour of its Portland Cement Plant located in Greencastle, Indiana. It is one of the largest cement plants in the Midwest and features state-of-the-art cement making technology. The plant is fully integrated from limestone mining through cement production. The company has estimated that it has limestone reserves sufficient to support operation at current levels of production for 30 to 100 more years.

About Buzzi Unicem

Buzzi Unicem stems from the 2004 merger of RC Cement (Buzzi Unicem) and Lone Star Industries (Dyckerhoff). In the United States, Buzzi Unicem operates 11 cement plants, one of which is a grinding plant, with an annual capacity of approximately 9.5 million tons. The distribution network, which greatly benefits from river transport opportunities, includes 30 terminals. Cement terminals receive bulk cement from their source plant by barge, rail or truck, depending on distance and location. Cement is stored in silos at the terminal until it is loaded out to fill a customer order or packaged for distribution.

How Much Energy Does It Take To Make Cement?

The cement industry ranks among the world's top energy using industries. In addition to coal, you will learn how Buzzi Unicem is using alternative fuels in cement kilns. Cement kilns are the world's largest moving manufacturing machines. Greencastle uses solid waste fuels, or chipped tires, as an alternative fuel.

RSVP By June 5

We hope you will be able to join us. Please RSVP to Kay Squires at (317) 639-1210 or respond by email at KSquires@lewis-kappes.com. Hope you can make it!

**2006 INDIEC Hosted Plant Tour
